

CHETAN BATRA

chetanbatra52@gmail.com | 9873166669 | 110063

Professional Summary

- Data Engineering professional with 9+ years of experience designing, building, and optimizing scalable data platforms, ETL pipelines, analytics solutions, and cloud-based data architectures. Strong expertise in SQL, Python, Azure Databricks, Azure Data Factory, data warehousing, data modeling, and large-scale data processing.
- Experienced in developing enterprise data products, building reusable data frameworks, automating data pipelines, and delivering analytics-ready datasets supporting strategic decision-making. Proven ability to work with business stakeholders, analytics teams, and engineering teams to deliver scalable and maintainable data solutions.

Skills

- ETL / ELT Development
- Data Pipelines
- Data Integration
- Data Transformation
- Data Warehousing
- Data Modeling
- Data Quality
- Python
- SQL
- PySpark
- REST API Concepts
- Stored Procedures
- Azure Databricks
- Azure Data Factory
- Azure Synapse Analytics
- Azure Data Lake Storage
- Spark
- Distributed Data Processing
- SQL Server
- Azure SQL
- Snowflake (Working Knowledge)
- PostgreSQL
- MySQL
- KPI Datasets
- Data Products
- Reporting Frameworks
- Operational Analytics
- Business Intelligence

Experience

Spencer Stuart | Gurgaon, Haryana

Manager -1

11/2019 - 12/2025

- Designed and implemented scalable cloud-based data pipelines supporting enterprise analytics and reporting platforms.
- Built ETL/ELT frameworks using Azure Data Factory, Databricks, SQL, and Python for ingestion and transformation of data from multiple enterprise systems.
- Developed reusable data models and analytics-ready datasets supporting business intelligence and operational reporting.
- Collaborated with stakeholders to gather requirements and translate business needs into scalable data solutions.
- Optimized SQL transformations, Spark workloads, and data processing pipelines improving performance and reliability.
- Implemented data validation and quality controls ensuring consistency and accuracy of enterprise data assets.
- Developed data products supporting reporting, analytics, and decision-making initiatives.
- Created technical documentation covering data models, transformation logic, and reporting frameworks.

Akhil Systems | Delhi
Senior Data Engineer
04/2018 - 11/2018

- Mentored junior team members and contributed to engineering best practices.
- Developed enterprise ETL pipelines and reporting datasets supporting business analytics initiatives.
- Designed and optimized SQL-based transformation processes and reporting frameworks.
- Built scalable data integration workflows connecting multiple operational systems.
- Performed data quality validation, reconciliation, and root-cause analysis activities.
- Collaborated with business stakeholders to deliver analytical solutions and operational insights.
- Supported performance tuning and optimization of data processing workflows.

Just Buy Live | Delhi
Data Developer
05/2016 - 01/2018

- Developed SQL-based ETL processes and reporting solutions supporting business operations.
- Built data transformation workflows integrating data from multiple operational systems.
- Created reporting datasets and dashboards supporting operational visibility and performance tracking.
- Automated recurring data preparation and reporting activities improving efficiency.
- Supported data quality and governance initiatives.

Key Projects

Responsibilities Data Assessment & Discovery

Real-Time Customer Event Processing Platform

Technologies

Apache Kafka, Azure Databricks, PySpark, Azure Data Factory, Azure Data Lake Storage Gen2, Delta Lake, Azure SQL Database, Power BI, Git

Project Overview

Designed and implemented a real-time event-driven data platform to capture, process, and analyze customer activity generated from multiple enterprise applications. The solution enabled near real-time reporting, operational dashboards, and analytics by processing streaming events through Apache Kafka and Azure Databricks.

Solution Design

- Designed an event-driven data ingestion architecture using Apache Kafka for streaming business events.
- Worked with architects and business teams to identify event sources and data requirements.

Kafka Implementation

- Configured Kafka topics for customer events, transactions, and operational activities.
- Worked with producers publishing events from enterprise applications.
- Built Kafka consumers using PySpark Structured Streaming in Azure Databricks.
- Managed consumer groups and offset handling to ensure reliable event processing.

Streaming Data Processing

- Developed real-time PySpark streaming jobs to consume Kafka messages.
- Performed data cleansing, enrichment, validation, and transformation.
- Implemented schema validation and error handling for malformed events.
- Supported both streaming and batch processing pipelines
- Performed record-level and aggregate-level validation.
- Established data quality monitoring and exception handling processes.

Data Quality

- Implemented duplicate detection and validation rules.
- Created monitoring dashboards for pipeline health.

- Performed reconciliation between source events and target datasets.

Education

Symbiosis | Pune

Post Graduation Diploma in Information Technology

01/2022

Sikkim Manipal University | New Delhi

Bachelor of Science

01/2016

Certifications

- Microsoft Certified: Azure Data Engineer Associate (DP-203)
- Microsoft Certified: Azure AI Engineer Associate (DP-100)
- HackerRank SQL Intermediate Certification
